Degree: B.E - CSE

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

### Input Format

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

#### Sample Test Case

```
Input: 5 10
21 31 41 51 61
3
31 60 51
Output: Value 31: Found
Value 60: Not Found
Value 51: Found
Answer
#include <stdio.h>
#define MAX 100
// You are using GCC
void initializeTable(int table[], int size) {
  for (int i = 0; i < size; i++) {
     table[i] = -1; // Initialize all slots as empty
}
int linearProbe(int table[], int size, int num) {
  int index = num % size:
while (table[index] != -1) { // Find the next available slot
     index = (index + 1) \% size;
```

```
return index;
       void insertIntoHashTable(int table[], int size, int arr[], int n) {
         for (int i = 0; i < n; i++) {
            int index = linearProbe(table, size, arr[i]);
            table[index] = arr[i]; // Insert the roll number
          }
       }
       int searchInHashTable(int table[], int size, int num) {
          int index = num % size;
          int originalIndex = index;
          while (table[index] != -1) {
            if (table[index] == num) {
               return 1;
            index = (index + 1) \% size;
            if (index == originalIndex) {
               break;
            }
          }
                                                                                       2116240101621
          return 0;
       int main() {
          int n, table_size;
          scanf("%d %d", &n, &table_size);
          int arr[MAX], table[MAX];
          for (int i = 0; i < n; i++)
            scanf("%d", &arr[i]);
          initializeTable(table, table_size);
          insertIntoHashTable(table, table_size, arr, n);
          int q, x;
          scanf("%d", &q);
        ofor (int i = 0; i < q; i++)
             scanf("%d", &x);
```
